EDUCATION

Pune Institute Of Computer Technology – BE 9.22

2022–2026

TECHNICAL SKILLS

Technical Skills: C, C++, Java, Python, JavaScript, Angular, Flask, FastAPI, HTML, CSS, SQL, NoSQL, DSA, Git/Github

INTERNSHIP

BNY – SDE Intern

Jun 2025 – Aug 2025 Pune, India

- Secured 3rd place in an internal Fixathon, focusing on identifying and remediating IDOR, component-level and XSS vulnerabilities using tools such as **Veracode**, **VMAD**, and **sandbox scans**.
- Enhanced a Python utility and deployed to production achieving a 95% success rate by executing a script to replace old company logos with new ones across 30K+ of DOC templates with varying formats.
- Collaborated in an agile team environment, showcasing strong debugging skills and secure coding standards using GitLab workflows

Enthral.ai – SDE Intern

Oct 2024 – Feb 2025 Pune, India

- Built responsive frontend components using React and AngularJS, improving UX and performance for a live proctoring platform. Developed a **WebSocket**-based proctoring system using FastAPI for backend.
- Worked extensively on real-time video streaming, API integration, authentication mechanisms and multi-camera synchronization for remote proctoring.
- Integrated machine learning models into the system pipeline for anomaly detection during exams.
- Implemented **Celery** with **Redis** for asynchronous task handling, significantly improving concurrency in real-time data processing.

PROJECTS

Vulnerability Management and Assessment System | GitHub Actions, Docker

Present

- Developing a **DevSecOps** based cybersecurity platform for end-to-end vulnerability detection, automated remediation and compliance validation.
- Developing reusable CI/CD security workflows along with script-based execution leveraging Semgrep, Trivy, OWASP ZAP and MobSF for multi-domain vulnerability detection.
- Implementing AI-powered remediation agents that analyze scan reports and generate secure patches automatically.
- Designing secure report pipelines to store scan results in AWS S3 and **compliance mappings** in PostgreSQL.

Smart AI Tracking Project Portal | RAG, Prisma, Github Webhooks

Present

- Build a smart AI-powered logbook to automatically track student GitHub commit histories for project tracking to generate progress summaries and flag inconsistencies in project development phases.
- Design and manage the database layer using Prisma ORM for structured storage of data.
- Integrate a collaborative chat interface connecting students and alumni, enabling skill-based teammate discovery and group discussions.

Student Management System | Salesforce, Apex, Triggers

- Designed a Salesforce data model using custom objects, junction objects and Master-Detail relationships.
- Developed Apex triggers to enforce business rules such as duplicate enrollment prevention and automated fee calculations.
- Built reports and dashboards to provide insights into student enrollment, course distribution, and pending fee status.

RESEARCH

Extractive Text Summarization using Extended TextRank Algorithm

2024

- Conducted research to improve ROUGE scores in extractive text summarization using NLP techniques under the guidance of Dr. Sheetal Sonawane.
- Enhanced the base TextRank algorithm by introducing a **dynamic factor** to increase entropy and capture topic diversity.
- Published work at ICON 2024; paper available at: aclanthology.org/2024.icon-1.54.pdf
